

A row of glass bottles in a factory setting, with a semi-transparent text box overlaid. The bottles are arranged in a line, and the background is blurred, showing a warm, industrial atmosphere. The text box is white with a semi-transparent background and contains the text "Staklo – primjer cirkularne ekonomije" in a bold, blue font.

Staklo – primjer cirkularne ekonomije

Proizvodnja staklene ambalaže

- Jedan **najranijih** pakirnih materijala
- Prvi dokazi **4000 pr.n.e.**
- **Egipćani proizvodili** šuplje staklo 1500 pr.n.e.
- **Napoleon** ponudio nagradu 12000 franaka za unaprjeđenje konzerviranja hrane. **Nicolas Appert** dokazao da zagrijavanjem na visoke temperature i pečačenjem u staklene spremnike hrana puno duže traje.
- Michael Owens (Illinois) – 1903. stroj

Proizvodnja staklene ambalaže

Zašto odabrati staklo?

prirodno

sigurno

reciklabilno

Staklo je

prirodno

- **Kvarcni pijesak temeljni je sastojak stakla (55-60%).**
- **Soda (15-20 %) snižava točku taljena.**
- **Kalcit, dolomit i feldspat (≈ 25 %) osiguravaju trajnost, tvrdoću, stabilnost i kemijsku otpornost.**
- **Rabljeno staklo smanjuje potrošnju energije i emisije CO₂.**

Staklo je

sigurno

- Za proizvodnju staklene ambalaže **nisu potrebni drugi sastojci, kemikalije ili plastificirani slojevi.**
- Staklo je inertno: **sigurna barijera za očuvanje zdravstvene ispravnosti i kvalitete proizvoda i produljenje njihova roka trajanja**

Staklo je

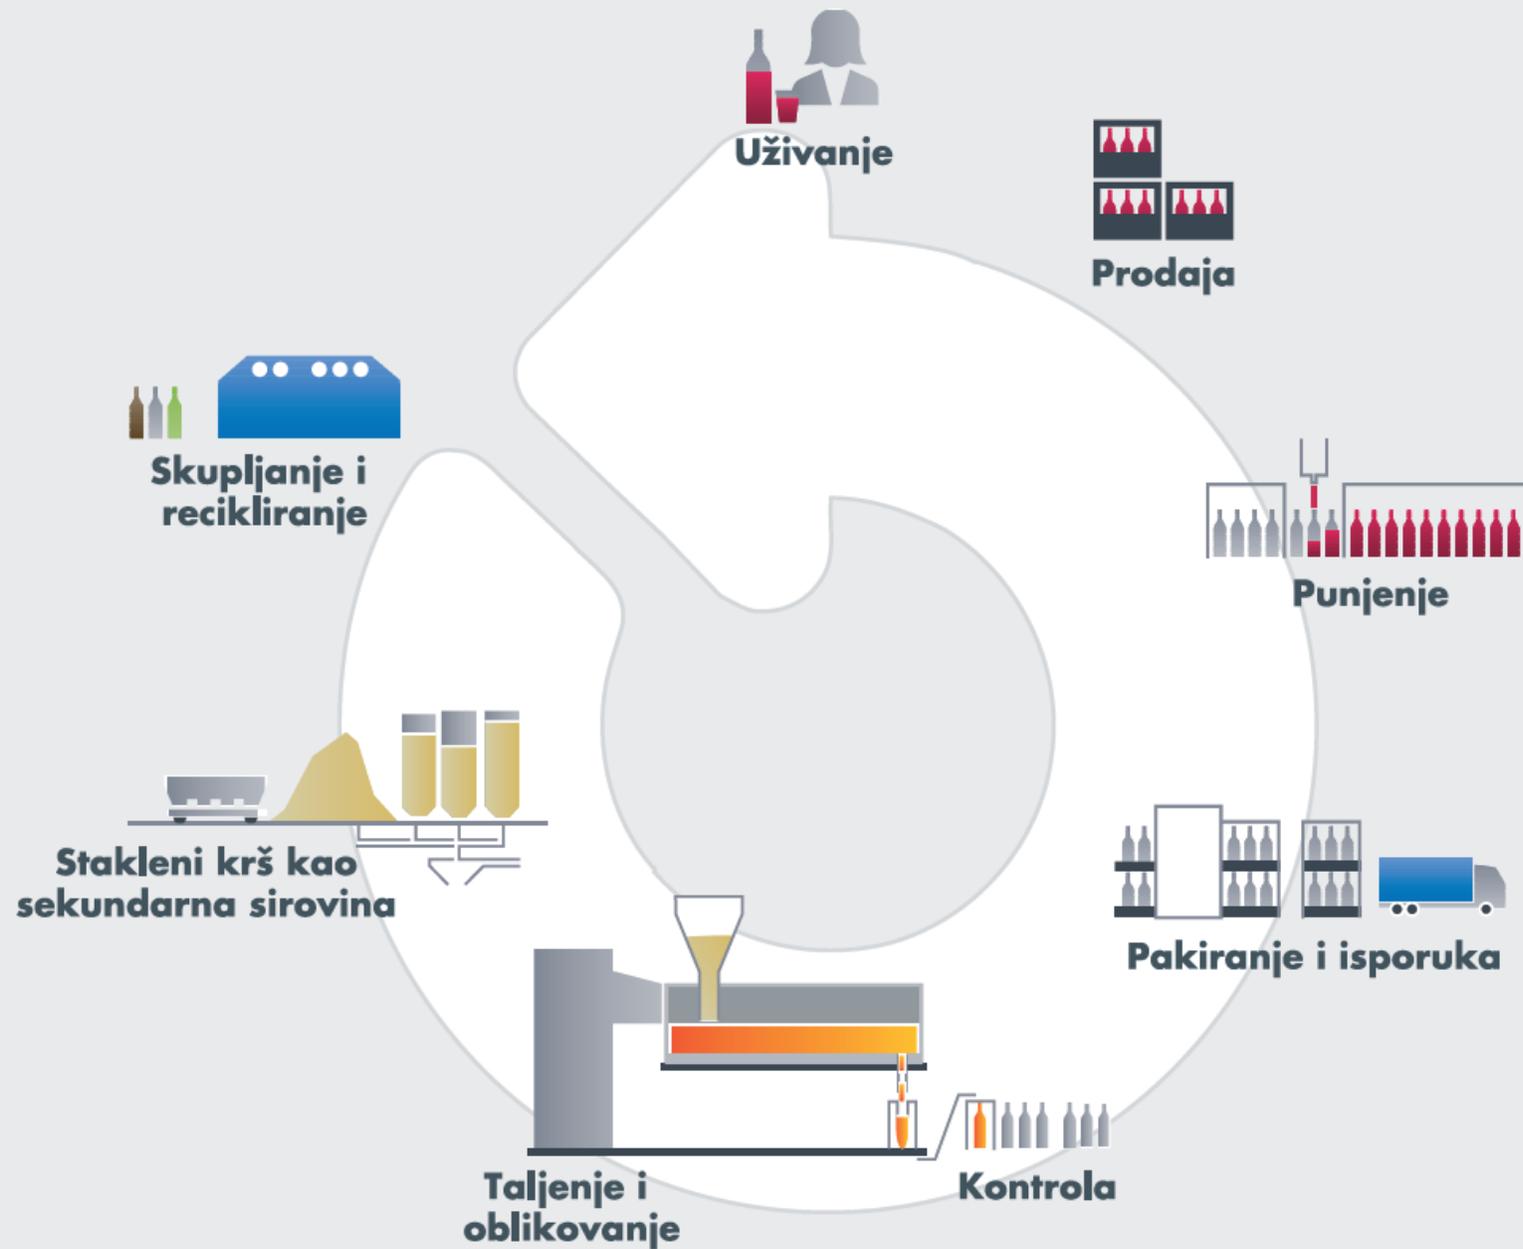

100%

i beskonačno reciklabilno

- Staklo recikliranjem **ne gubi kvalitetu**.
- Što je **veći udio rabljenog stakla, to je veća ušteda energije**: 10 posto rabljenog stakla štedi 12% sirovina, 3 % energije i 5 % emisija CO₂.
- 1 t reciklata štedi 670 kg CO₂ - C2C.
- Staklene boce i staklenke mogu se **ponovno upotrijebiti i puniti**.

Kružni tok stakla

U 2022. postigli smo
udio od

57 %

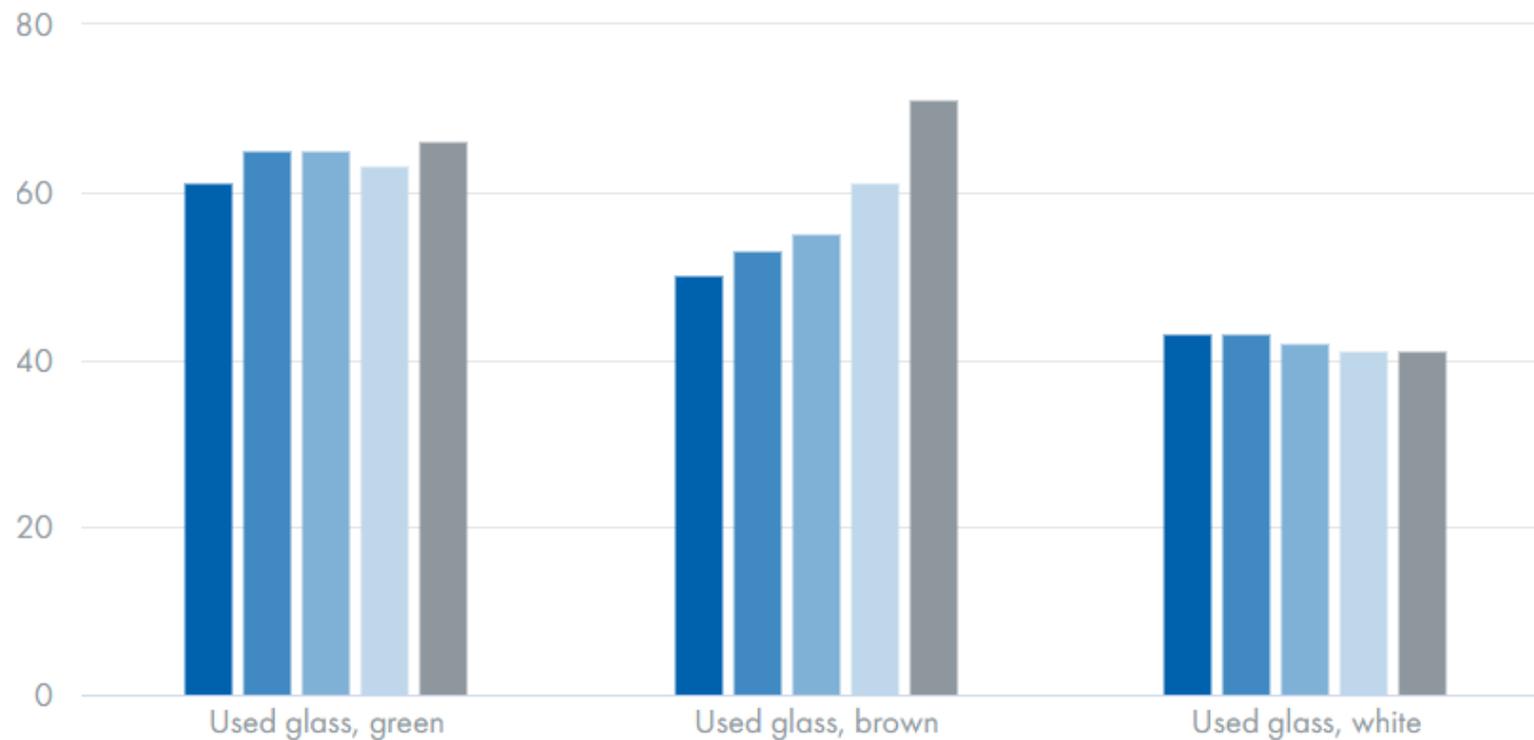

rabljenog stakla

što je u usporedbi s 2019. povećanje od 4 posto

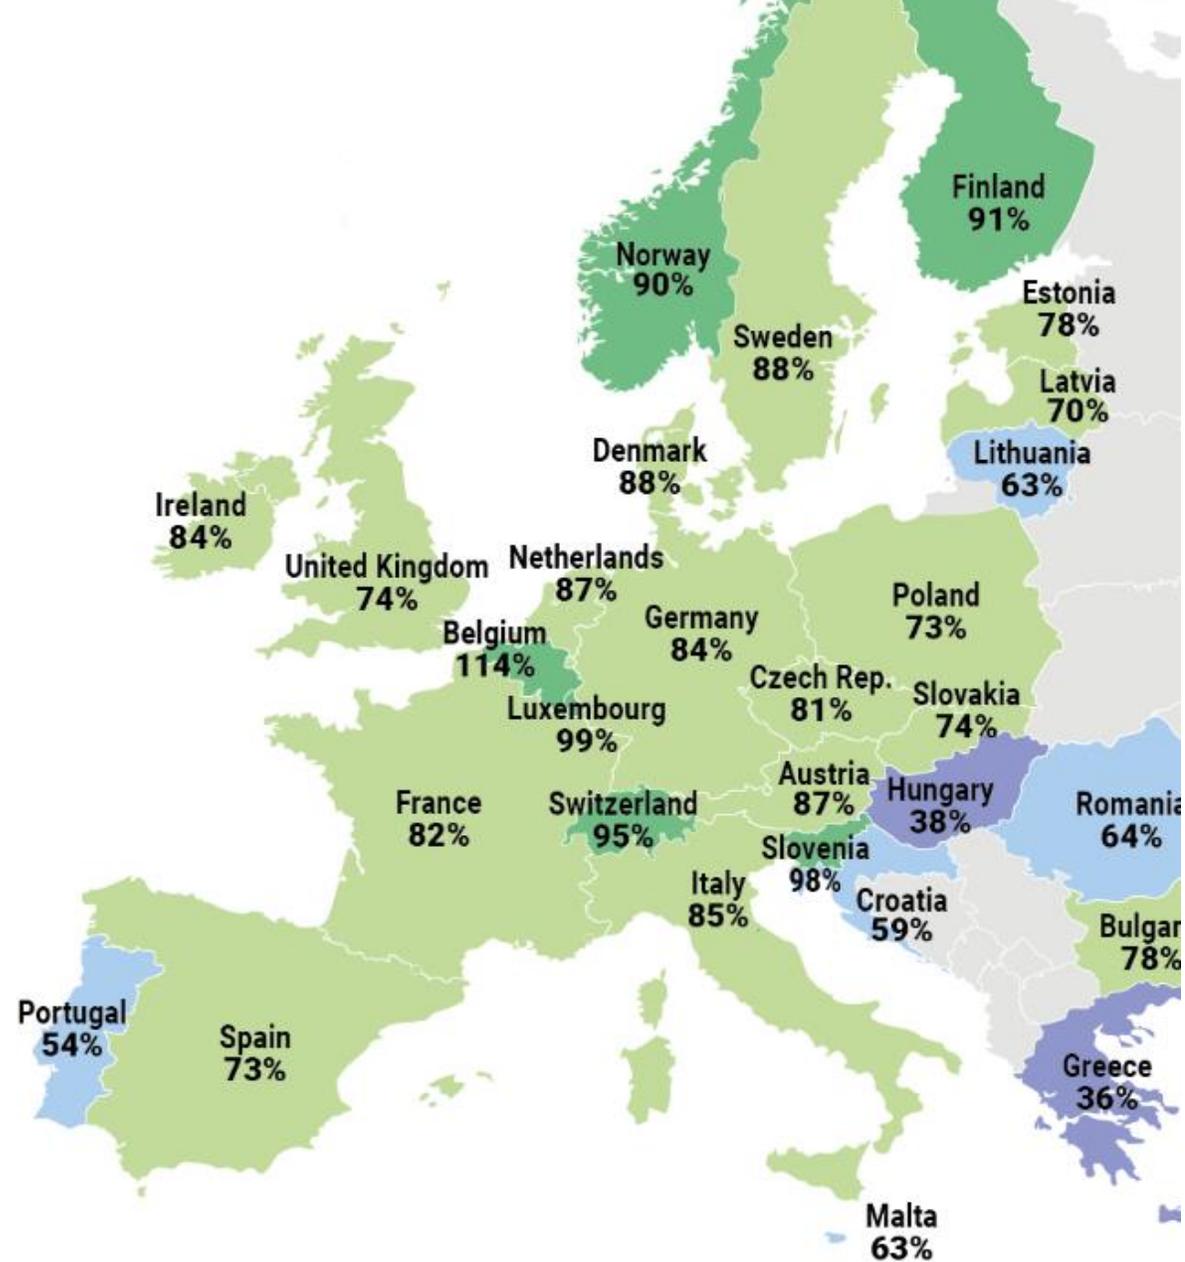

Udio reciklata

Share of used glass in the glass production

in %

Stope recikliranja stakla u Europi (FEVE/2021.)
